
Multiple Gmail ids for same account

Contributed by Rishiraj Singh

You can have multiple email address of your existing Gmail account just add "+" symbol after your user name then add anything followed by @gmail.com. Read the example below for better understanding. My Gmail id is rishiforu@gmail.com Suppose I have three friends snehal, teena, veena and if they ask for my email address then I tell them its rishiforu+snehal@gmail.com, rishiforu+teena@gamil.com and rishiforu+veena@gmail.com

When they send me at this address it first goes to Gmail server where it recognize it as rishiforu@gmail.com and avoids " " sign and anything after it. So any mail send to rishiforu+anything@gmail.com, come in my inbox. So If you have Boyfriend/Girlfriend tell him/her email your email id as yourmail+ yourmate@gmail.com

Note: TO check your mail you have to login as yourmail@gmail.com that is in my case rishiforu@gmail.com without " " sign.
